Pathology education suite

Tutor & OLT

Educate and connect with pathology education suite

Develop microscopy courses and related exams with digital slides, then share them easily across networks and access via your mobile platforms.

Philips pathology education suite consists of two software products that provide an excellent platform for digital pathology teaching, training, and assessment.

- **Tutor** - Tool for course development
- **OLT** - Online testing and examination generation module

Our education suite puts your educational content into the hands of students everywhere, from university to home.

Products are for research use only and not for use in diagnostic procedures.

Key advantages

- Entirely web based, accessible via any web browser with no downloads or plugins required
- Supports most common third party digital slide formats as well as microscope images
- Embed additional multi-media material such as sound files, documents, and online videos

Empowering educational content for the digital age

When organizing a digital pathology course there is a lot to consider – managing the expectations of contributing professionals, organizing and securing digital assets, administering access to course material, and more.

Having the right content development system in place can make a huge difference. Imagine creating a course where your entire slide set is online and able to be viewed by your students at any time, anywhere in the world, from university to home.

Pathology education suite joins our comprehensive portfolio of pathology solutions, which reinforce our assertion that sharing multiplies the value of knowledge.

Tutor

Digital pathology offers you new ways of working and education is a prime example. With over 35,000 users worldwide, Tutor is one of the leading education software for online education and training. Our Tutor module provides you with all the tools required to author and build virtual microscopy courses. Whether you're teaching pathology, histology, biology, botany or any other microscopy-based course, you can fast track development and delivery. Regardless of group size or geographic distribution, Tutor supports student learning in an effective and efficient way.

OLT (Online Testing)

The OLT module is a perfect add-on to Tutor when you want to manage assessments and examinations. It provides a simple, intuitive way to ensure fairness for students/trainees and reduce the administrative burden on staff.

OLT assists with creation of tests to fit within any environment, from informal classroom quizzes to formal examinations. And it is configurable by an instructor in just minutes.

Customizable security settings enable administrative control for simple, safe access for individual users via unique username/password. Question and answer feedback can be generated and presented to the student automatically. In addition, tests/exams can be scored automatically.

Tablet Viewing module

Learning material that is available on the go is no longer a 'nice to have,' it is essential. Extend Tutor's access to mobile platforms with the optional tablet viewing module. Tablets provide a valuable tool for users to access content in a personalized way, from any location, at any time. All training material generated via a Tutor account is accessible via the tablet.

The tablet viewing module supports all image formats, and any changes on a desktop or tablet are synched across the account. The module is compatible with Safari on iOS, Internet Explorer on Windows Mobile, and Google Chrome on Android tablets.

Put these powerful tools to work for you **today**

Easy setup

Implementation is fast and easy. We can deploy Tutor within your local IT infrastructure, or if no existing IT infrastructure is in place, Cloud can provide a secure, robust, and resilient fully managed hosting environment. Licensing fee is available either as an annual rental model or outright capital purchase.

A complete learning portal

Begin with Tutor for content management, then add the OLT module and the tablet viewing module at the same time, or retrospectively. This provides you with a complete end-to-end learning portal for your digital microscopy teaching, training, and assessment needs.

We have extensive experience in providing digital pathology education solutions, and we want to share our knowledge with you.
